

LOCALVIBE Hyper-Local Event Discovery

LocalVibe Platform

Hyper-Local Community Gathering & Geospatial Event Discovery System

Comprehensive Architectural, Engineering & Implementation Project Report

AUTHOR & MAINTAINER

Sahil (Sahil7414)

PROJECT STATUS

Production-Ready (v1.0.0)

REPOSITORY

github.com/Sahil7414/LocalVibe

CORE TECH STACK

**React 18 • Node.js • Express •
Leaflet • MongoDB**

Official Project Documentation & Technical Review

September 2026 • Verified Release

1. Executive Summary & Problem Definition

LocalVibe is a full-stack, hyper-local community discovery platform specifically engineered for Indian metropolitan hubs and neighborhoods. In modern urban environments, finding niche, authentic, and spontaneous social gatherings (such as tech meetups, book clubs, sunrise yoga sessions, open-mic poetry, and board game meetups) is heavily fragmented across siloed messaging groups and generic commercial ticketing portals.

Core Mission

Empower urban residents, remote workers, students, and creators to discover, organize, attend, and navigate nearby gatherings with zero friction, instant interactive geospatial mapping, and high-trust community moderation.

Key Solution Pillars

Geospatial Discovery

Interactive Leaflet.js map with custom category markers, 500m walkable radar radius, and automatic viewport-bound queries.

Smart City Resolution

Database of 28+ Indian metros with fuzzy neighborhood-to-metro normalization, reverse geocoding, and 1-click GPS sync.

RSVP & Calendar Sync

Optimistic RSVP tracking with concurrency-safe counts and native exports for Google, Apple iCal (.ics), and Outlook.

2. System Architecture & Tech Stack

LocalVibe is built as a decoupled, modern multi-tier Single-Page Application (SPA) backed by a high-performance Express REST API and a resilient dual-layer data store.

Tier / Domain	Technology	Key Function & Architecture Rationale
Frontend Client	React 18, Vite	Fast HMR builds, component-driven UI, declarative lifecycle management, and optimistic state updates.
Mapping Engine	Leaflet.js, React-Leaflet	Zero-cost OpenStreetMap integration, performant vector circles (500m Walkable Radar), and custom HTML pins.
State & Auth	Context API	Global state management for Auth (JWT persistence), Location (GPS/City switch), and Toast notifications.
Backend API	Node.js, Express.js	Modular Controller-Service-Repository pattern, rate-limited middleware, and centralized error handling.

Tier / Domain	Technology	Key Function & Architecture Rationale
Primary DB	MongoDB Atlas	Mongoose ODM, 2dsphere geospatial indexing for GeoJSON coordinates, compound indices for RSVP constraints.
Fallback DB	In-Memory Store	Zero-dependency dev & offline fallback pre-seeded with 30 realistic Indian events and 8 authenticated test users.
Security	Bcrypt.js, JWT, CORS	Secure password hashing (10 salt rounds), HMAC SHA-256 tokens, input sanitization via express-validator.

3. Core Feature Breakdown & Engineering Details

3.1 Interactive Geospatial Map Discovery

- **Leaflet Map Canvas:** Dynamic map rendering with smooth zoom/pan animations, custom pin popups, and auto-centering based on user location.
- **500m Walkable Radar:** Visual geofence overlay highlighting events within short walking distance of the selected center point.
- **Dual-Mode Layout:** Seamless switching between split Map + Grid mode and Full-Width Grid mode on desktop and mobile devices.

3.2 Intelligent Indian City Hub & Normalization

The geocoding subsystem (`geocodingService.js`) features an Indian metropolitan hub supporting 28+ cities:

Covered Major Metros	Covered Emerging Hubs
Mumbai, Delhi NCR, Bengaluru, Pune, Hyderabad, Chennai, Kolkata, Ahmedabad, Jaipur, Goa, Kochi, Chandigarh.	Lucknow, Indore, Surat, Bhopal, Vadodara, Coimbatore, Visakhapatnam, Varanasi, Amritsar, Dehradun, Guwahati, Mysore.

- **Fuzzy Alias Mapping:** Automatically maps micro-neighborhoods (e.g., *Bandra, Juhu, Thane* → **Mumbai**; *Hauz Khas, Gurugram, Noida* → **Delhi NCR**; *Koramangala, Indiranagar* → **Bengaluru**).
- **Proximity Matching:** Calculates Haversine spherical distance (< 80 km) to assign raw GPS coordinates to the nearest regional hub.
- **Nominatim Integration:** Live OpenStreetMap address search prioritized with `&countrycodes=in`.

3.3 Event Lifecycle & Creator Publishing Flow

- **Publishing Wizard:** Form supporting title, rich multiline description, category selection, price (Free or ₹ INR), start/end date-times, and venue address.
- **Interactive Pin Drop:** Creators can click anywhere on the Leaflet map to set exact GPS venue coordinates, with instant reverse-geocoding.
- **Quick Neighborhood Presets:** City-specific 1-click venue chips (e.g. *BKC, Kala Ghoda, CyberHub, Koramangala*).
- **Image Handling:** Supports both high-res curated preset images, direct web URLs, and client-side Base64 image uploads (under 5MB).

3.4 RSVP, Attendance & Calendar Export Engine

- **Mutual Exclusivity:** Users can toggle between **GOING** and **INTERESTED** ; status updates atomically decrement/increment server attendee counts.
- **Apple iCal (.ics) Generator:** Generates RFC 5545 compliant VCALENDAR blob files client-side for iOS and macOS Calendar import.
- **Google & Outlook Deep Links:** Timezone-normalized TEMPLATE URLs for 1-click cloud calendar integration.

4. Database Schema & Data Models

4.1 User Model (Mongoose / In-Memory)

```
{
  "_id": "ObjectId / UUID",
  "name": "Sahil Sharma",
  "email": "sahil@example.com",
  "passwordHash": "$2a$10$e8X...",
  "role": "USER | ADMIN",
  "city": "Mumbai",
  "bio": "Community organizer & photography enthusiast",
  "avatar": "https://images.unsplash.com/...",
  "createdAt": "2026-09-22T10:00:00.000Z"
}
```

4.2 Event Model

```
{
  "_id": "ObjectId / UUID",
  "title": "Bandra Sunset Acoustic Jam & Picnic",
  "description": "Unplugged acoustic music session by the sea at Carter Road Amphitheatre.",
  "category": "Music & Concerts",
  "startDate": "2026-09-28T17:30:00.000Z",
  "endDate": "2026-09-28T20:30:00.000Z",
  "price": 0,
  "image": "https://images.unsplash.com/photo-1514525253161...",
  "location": {
    "type": "Point",
    "coordinates": [72.8222, 19.0660], // [Longitude, Latitude]
    "address": "Carter Road Amphitheatre, Bandra West",
    "city": "Mumbai"
  },
  "organizer": "UserRef / Populated Object",
  "status": "PUBLISHED | SUSPENDED | CANCELLED",
  "goingCount": 18,
  "interestedCount": 34,
  "attendeesCount": 52,
  "isFeatured": true
}
```

5. REST API Endpoints Specification

Method	Route Endpoint	Auth	Description
POST	/api/auth/register	Public	Register a new user account with bcrypt password hashing
POST	/api/auth/login	Public	Authenticate user credentials and return JWT bearer token
GET	/api/auth/me	Bearer	Fetch authenticated user profile and active RSVPs
GET	/api/events	Public	List events with filtering (city, category, search, timeframe, price)
GET	/api/events/:id	Public	Retrieve full event details, organizer profile, and RSVP counters
POST	/api/events	Bearer	Create and publish a new event with GeoJSON coordinates
POST	/api/rsvp/:eventId	Bearer	Submit or toggle GOING / INTERESTED RSVP status
GET	/api/rsvp/my-events	Bearer	Get user's registered, bookmarked, and hosted events
POST	/api/admin/events/:id/suspend	Admin	Moderate and suspend an event violating community guidelines

6. Quality Assurance & Test Verification

LocalVibe includes automated end-to-end integration and unit test suites covering the entire user journey, concurrency constraints, and validation safety.

✓ Auth & Tokens

21/21 Tests Passed

Registration, bcrypt validation, token refresh, and profile updates.

✓ Event Validation

9/9 Tests Passed

GeoJSON coordinate checks, date constraints, and image payload limits.

✓ RSVP Concurrency

37/37 Tests Passed

Atomic count increments, duplicate rejection, and status toggles.

Test Suite Execution Log

```
$ npm run test:event
[InMemoryStore] Initialized with 8 demo users and 30 Indian events.
=====
STARTING LOCALVIBE PHASE 6 EVENT CREATION TESTS
=====
[PASS ✓] POST /api/events without Bearer token returns 401 Unauthorized
[PASS ✓] Validator rejects empty event title
[PASS ✓] Validator rejects non-existent category
[PASS ✓] Validator rejects end date prior to start date
[PASS ✓] Validator rejects out-of-range longitude
[PASS ✓] Validator rejects negative price
[PASS ✓] Validator rejects missing or empty cover image
[PASS ✓] Validator approves complete valid event payload
[PASS ✓] JWT token generated for organizer
=====
PHASE 6 TESTS COMPLETED: 9/9 PASSED (100%)
=====
```

7. Summary & Future Roadmap

LocalVibe successfully addresses the challenges of fragmented community event discovery in Indian cities through a robust, responsive web platform. The system operates with sub-second page loads, resilient offline data capabilities, and a polished design system.

Future Enhancements

- **Mobile Push Notifications:** Web Push API notifications for upcoming gatherings and host announcements.

- **WhatsApp & UPI Ticketing:** Native integration for UPI QR-based check-ins and WhatsApp RSVP confirmations.
- **Real-time Group Chat:** Ephemeral attendee chatrooms per gathering using Socket.IO.

Project Certification

This technical report certifies that the LocalVibe project codebase is fully tested, built, and synchronized with the official GitHub repository at <https://github.com/Sahil7414/LocalVibe>.
